

# Versatile Creasing & Micro-Perforating Solution

CreaseStream Auto feed Mk II

The feeder takes an impressive stock load of 9cm

Purposely designed dynamic 13 degree feeding head fans out the sheets

# Introducing The CreaseStream Auto feed Mk II

When it comes to processing a full range of finished products to the high standards digital print companies now demand, CreaseStream solutions with their patented rotary tooling applications, present a faster and more versatile way of doing it!

The **CreaseStream Auto feed Mk II**, with its new black & grey look & several **highly effective modifications** help create an impressive upgrade version of the previous mini-Auto-feed.

**Patented design means continuous feed without marking!**

Our patented feeding technology allows the operator the luxury of being able to top up the stock during production, so

output remains uninterrupted. Our unique design is proven to help prevent scratching or marking.

We have replaced the first edition feeding head with a **Dynamic** version that **self-fans** the sheets, so your operator doesn't need to. This has allowed us to **treble** the capacity of stock the feeder can hold to an impressive 9cm and ensure that consistency of throughput is maximised.

The Auto feed Mk II version will deliver high quality creasing & micro-perforating with an array of crease/blade options as used on our previous model; however, the whole **operator experience** is significantly **enhanced** due to the thoughtful development process we applied based around customer feedback.

**Now it is possible to load into the tooling section of the machine up to FIVE tooling options in any chosen configuration to suit more intricate finishing applications.**

# Features & Benefits...

## CreaseStream Auto feed Mk II

Eliminates 'fibre cracking' on a full range of digital and offset stocks up to 400gsm

Unique 9cm 'top load' continuous feeder, designed to prevent toner scratching & marking

Outputs an average of 4,500 sheets per hour

Patented Tri-Creaser Advance technology is the only application especially designed to crease both sides of the sheet to enhance crease strength and presentation

Simple colour coding system makes changing of crease styles quick & easy

Produces fine & flat micro-perforations on stock materials 60 -350gsm, so good that perfed sheets may run through any laser printer or copier, trouble free!

Optional Spine & Hinge tool available for processing perfect bound book covers

Inbuilt calliper mechanism, allows instant changeover from one stock weight to another

Can apply multiple creases, trims & micro-perforations to sheets without reducing output speed

Feeds maximum sheet width of 52cm

*The Tri-Creaser Advance is the only rotary device that successfully eliminates digital cracking. The unique three in one application works both sides of the crease to ensure maximum crease depth & presentation*

## Flatbed quality micro-perforating

Apply cylinder quality micro-perforations to a wide range of printed work. Our micro-perforator produces fine, flat & almost invisible results, using 17tpi, 25tpi & 52tpi (teeth per inch) blades that allow the perforated sheets to easily run through any laser printer or Copier.
